SUMMARY

Final-year Electrical Engineering student at Haldia Institute of Technology with hands-on experience building production-style backend systems and GenAI pipelines. Designed and shipped a real-time social platform with queue-based async processing, a RAG document-QA system on a vector database, and an AI classification pipeline for e-commerce return data. Comfortable reasoning about caching, async job processing, and service boundaries, not just wiring up APIs. Actively seeking backend/full-stack SDE internships.

EDUCATION

Haldia Institute of Technology <i>Bachelor of Technology in Electrical Engineering</i> • CGPA: 7.22 / 10 • Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management	Haldia, West Bengal 2023 – 2027
---	------------------------------------

TECHNICAL SKILLS

Languages: Java, JavaScript, Python
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, JWT Authentication, Socket.io, BullMQ
Databases: MongoDB, Redis, Qdrant (Vector DB), SQL (Basics)
GenAI: Groq LLaMA, Gemini AI, LangChain, LangGraph, RAG pipelines
DevOps & CI/CD: Git, GitHub Actions, Docker, Docker Compose, Postman
DSA: 100+ problems solved on LeetCode (Java)

PROJECTS

Networkq | *Next.js, Node.js, MongoDB, Redis, Socket.io* | [Live](#) | [GitHub](#)

- Built a LinkedIn-style networking platform with user profiles, connections, and a content feed using Next.js and Express
- Added Redis caching for frequently accessed data (profiles, feed queries), reducing repeated database hits and improving response times
- Built real-time messaging with Socket.io using JWT-based handshake authentication, so only verified users could open a persistent WebSocket connection

DocChat | *LangChain, Qdrant, Redis, Node.js, Groq LLaMA* | [Live](#) | [GitHub](#)

- Built a RAG pipeline to answer questions over PDF/DOCX/TXT files, chunking documents and storing embeddings in Qdrant instead of relying on keyword search
- Designed the retrieval step to re-rank chunks by semantic similarity before passing context to the LLM, cutting down irrelevant context and hallucinated answers
- Used Redis-backed task queuing to handle concurrent document ingestion jobs without blocking new uploads

Return Reason Analyzer | *React, Node.js, MongoDB, Redis, Groq LLaMA, WebSockets* | [Live](#) | [GitHub](#)

- Built a 12-category AI classifier to bucket e-commerce return reasons, solving the problem of merchants manually tagging thousands of free-text return comments
- Added batch CSV processing with a Bull/Redis queue so large merchant histories could be classified asynchronously without timing out the request

OPEN SOURCE & ACHIEVEMENTS

GirlScript Summer of Code (GSSoC) <i>Selected Contributor</i> • Selected as an open-source contributor; contributed to projects in web development and AI domains	2025
Hacktoberfest 2024 <i>Contributor</i> • Merged multiple pull requests; fixed UI bugs and improved frontend accessibility across open-source repositories	2024
